

Here to give the UK seafood sector  
the support it needs to thrive.

# Climate Change: Update on our work to support the seafood industry response

Presentation to: Common Language Group

26<sup>th</sup> September 2023

# Contents

1. Improving sustainable fisheries management
2. Adaptation in wild capture seafood: refresh review
3. Mitigation: seafood emissions profiling tool

# What are FMPs and why are they being developed?

You can watch a Future of Our inshore Fisheries video explaining what FMPs are and how they are being developed from the link below:

# Adaptation in wild capture seafood: refresh review

1. **Aim:** Support the seafood industry to develop a managed adaptive approach to climate change.
2. **Scope:** Marine to Outlet, domestic/international, wild capture, whitefish/pelagic/shellfish/salmon.
3. **Objectives:**
  - i. Review projected climate change impacts for seafood.
  - ii. Develop seafood industry adaptation responses.
4. **Tasks:**

Stage 1 - Research design.

Stage 2 - Reviewing impacts, assessing risks.

Stage 3 - Developing adaptation plans.

Stage 4 - Reporting and publication.

Stage 5 - Implementation, embedding, monitoring (annual watching brief – light touch).
5. **Deliverable:** Adaptation plans (and report) for seafood industry & UK Govt.

## Seafood emissions profiling tool

**Thank You**
