The authors would like to thank the many other people who contributed to this study.

We are especially grateful to:

The several hundred UK vessel owners and skippers who contributed their vessel accounts to the survey.

The national fishermen's organisations for their support and the producer organisations, vessel agents and fishermen's associations throughout the UK who assisted.

The UK government fisheries departments, and the Marine Management Organisation, particularly Kevin Williamson and his team.

The many firms of accountants who supplied accounts on behalf of vessel owners.

The authors would also like to thank Tsvetina Yordanova and Kirsten Milliken for their support and assistance throughout this project, and Simon Shaw for his work designing the infographics within.

Fleet Segmentation Summary	3
Segment Performance Estimates:	
Area VIIA demersal trawl over 10m	4
Area VIIA nephrops over 250kW	5
Area VIIA nephrops under 250kW	6
Area VIIb-k trawlers 10-24m	7
Area VIIb-k trawlers 24-40m	8
UK Gill netters over 10m	9
Inactive	10
UK Longliners over 10m	11
Low activity vessels over 10m	12
Low activity vessels under 10m	13
Miscellaneous vessels over 10m	14
North Sea beam trawl over 300kW	15
North Sea beam trawl under 300kW	16
North Sea nephrops trawl over 300kW	17
North Sea nephrops trawl under 300kW	18
North Sea and West of Scotland demersal trawl over 24m	19
North Sea and West of Scotland demersal pair trawls and seines	20
North Sea and West of Scotland demersal seiners	21
North Sea and West of Scotland demersal trawl under 24m, over 300kW	22
North Sea and West of Scotland demersal trawl under 24m, under 300kW	23
UK pelagic trawl over 40m	24
UK pots and traps 10m-12m	25
UK Pots and traps over 12m	26
South West beam trawl over 250kW	27
South West beam trawl under 250kW	28
UK scallop dredge over 15m	29
UK scallop dredge under 15m	30
UK demersal trawls and seines under 10m	31
UK drift and fixed nets under 10m	32
UK pots and traps under 10m	33
UK hooks under 10m	34
West of Scotland nephrops trawl over 250kW	35
West of Scotland nephrops trawl under 250kW	36
Sample Size for Vessel Accounts	37
Operating profit margin	38
Net profit margin	39

Highlights

Nb. 2014 estimates are based on provisional official data for 2014, 2014 fuel prices and 2013 cost structure derived from 2013 vessel accounts submitted to Seafish.

The UK fleet as a whole saw an increase in fishing revenues from £751 million in 2013 to around £830 million (provisional figure) in 2014.

The number of active fishing vessels fell from 4,631 in 2013 to 4,530 (provisional figure) in 2014.

UK scallop dredge over 15m and under 15m segments both saw a drop in operating profit margin from 21-22% in 2012 to 14-16% in 2013. Data suggest a minimal improvement on these margins for 2014. For over 15m vessels, average revenue per vessel has decreased annually from £552,000 in 2011 to £413,000 in 2014, while average operating profit per vessel declined from £133 to £69,000 over the same period.

From 2012 to 2013, **West of Scotland nephrops trawlers** saw a decrease in average revenues per vessel and a drop in operating profit margin from 21-22% in 2012 to 14-15% in 2013. 2014 data suggest a minor increase in average revenues and operating profit per vessel.

South West beam trawlers saw a halving of profit margins from 2012 to 2013 with only a small improvement suggested by 2014 estimates.

From 2013 to 2014, operating profit margins increased slightly for **North Sea and West of Scotland white fish vessels**.

For **North Sea and West of Scotland white fish** segments, the **seine netters** and **under 24m trawl** segments had higher operating margins (10%, 18%, 13%) than the over 24m trawl and the pair trawlers (7%, 8%) in 2013. From 2012 to 2014 the **over 24m trawl** segment and the under 24m, over 300kW segment saw increases in average revenues and operating profit per vessel.

Having seen a dip in operating profit margin from 2012 to 2013, **North Sea nephrops trawlers** generated an increase in operating margin from 2013 to 2014.

North Sea beam trawlers remain unprofitable on average. For the over 300kW vessels, revenues per vessel remained steady from 2013 to 2014 and operating profit improved from a loss in 2013 but margin was still only 1%. Under 300kW vessels saw a substantial drop in average revenues and operating profit from 2013 to 2014.

Irish Sea nephrops trawlers show a small increase in operating profit margin from 2013 to 2014 after an overall dip in margin from 2012 to 2013. Vessel numbers in the under 250kW segment continued to decline from 57 vessels in 2012 to 44 in 2014 while vessel numbers in the over 250kW segment remained approximately stable over the period at 39 to 38 vessels.

After a dip in total and average per vessel revenues from 2012 to 2013, the **south west (Area VIIb-k) trawlers 24m – 40m** saw an increase in both total and average revenues from 2013 to 2014. Average operating profit margin has around break-even point however from 2012 to 2014.

The smaller **south west trawlers, 10m – 24m**, fared better in terms of operating profit margins, moving from 23% of revenues in 2012 to an estimated 26% of revenues in 2014.

Pots and traps vessels 10-12m and saw slight increases in average revenues per vessel from 2012 to 2014 but a slight decrease in operating profit over the same period. **Vessels over 12m** saw a bigger increase in revenues over the period and an increase in operating profit.

2,000 registered vessels were not active during 2014. Average length of these vessels was 7.3m.

A further 1,500 under 10m vessels and 57 over 10m vessels in the UK fleet were classed as **low-activity** having generated less than £10,000 revenues in 2014. These under 10m vessels had average revenues of £3,100 and spent an average of 27 days at sea during 2014.

Introduction and Methods

This dataset contains financial, economic and operational performance indicators for approximately 30 UK fleet segments for the period 2005-2014. 2014 estimates are based on provisional official activity and landings statistics so should be considered as provisional estimates. Once vessel accounts for 2014 have been collected and official data finalised, Seafish will publish new estimates for the year.

Seafish produces the dataset by combining costs and earnings information from vessel accounts provided by vessel owners to the annual Seafish UK Fleet Survey with official effort, landings and capacity data for all active UK fishing vessels provided by the UK Marine Management Organisation (MMO).

The outputs for all years are produced using a consistent methodology and fleet segmentation criteria so that trends in key indicators can be observed over time. Note that vessels can be in different segments in different years if they change their gear, area or target species.

First developed in 2008, the methodology was used to produce single year estimates that were reported in the 2008, 2009 and 2010 Seafish economic survey reports of the UK fishing fleet.

The methodology was again revised in February 2013. The revision involved changing the way that the sample cost structure for each fleet segment was calculated, resulting in a more robust approach when dealing with outlying (far from average) cost data.

This is a summary of the method we used to estimate the earnings, cost structure and profits of the UK fleet and fleet segments:

1. The UK fleet is stratified into approximately 30 relatively homogeneous fleet segments using MMO data on capacity, effort and landings for each vessel (see segmentation criteria worksheet).

2. Seafish uses a self-selecting stratified sampling approach to obtain an adequate sample size of vessel financial accounts for each fleet segment.

3. Costs and earnings data from vessel accounts are allocated to particular fleet segments following the segmentation procedure, giving approximately 30 costs and earnings segment samples. Sample sizes for vessel accounts in each fleet segment and each year can be found at the end of this workbook.

4. To estimate the cost structure of all vessels in each fleet segment, we:

a) add together the individual cost and earnings items from vessel accounts within each segment sample to create a 'combined segment sample cost structure'.

b) calculate the sum of each cost item in the 'combined segment sample cost structure' as a proportion of the sum of fishing income e.g. sum of gear cost is 10% of sum of fishing income, sum of commission is 3% of sum of fishing income etc.

c) calculate fuel costs and crew costs differently from the other costs. For crew share, we give a minimum £100 per day in instances where the actual observed amount within the 'combined segment sample cost structure' is lower. For fuel costs, the capacity (VCUs) and fishing effort (days at sea) of each vessel are used to estimate fuel consumption in litres, which is then combined with the average annual red diesel price (excluding duty) to calculate the fuel cost estimates for each vessel.

d) Following calculation of fuel cost and crew share, we apply the proportions from all the other costs within the 'combined segment sample cost structure' to the official declared fishing income for each vessel within each fleet segment, which enables use to calculate Gross Value Added, operating profit and net profit for each vessel.

5. UK fleet totals and fleet segment totals and averages are then calculated from the estimates produced for each vessel.

Where we have low sample size for a particular segment in a particular year we take into account previous years' estimates along with the reference year fuel price data to estimate costs.

All financial data are reported in nominal pounds sterling (money of the day).

Data for the years 2005-2013 are estimates based on same year costs and earnings samples collected by Seafish. Data for 2014 are estimates using **provisional** official statistics on landings, capacity and effort, along with 2014 fuel price and previous years' cost structures. Therefore, **2014 estimates should be considered preliminary estimates**. Seafish will revise these estimates when sufficient 2014 costs and earnings sample data are available later in the year.

All the costs and profits data contained within these worksheets are Seafish estimates based on the latest available data. Additional vessel accounts data for latter years may become available and be incorporated into future analyses.

Qualifying criteria for Seafish fleet segments							
Seafish Segments	Main Area	Main DAS Gear	Main Species by value	Main Gear Type	Power Main Engine	Vessel Length	Value of landings
1	Area VIIA demersal trawl over 10m	VIIA	Demersal trawls and seines			>= 10m	
2	Area VIIA nephrops over 250kW	VIIA	Demersal trawls and seines	Nephrops	>= 250 kW	>= 10m	
3	Area VIIA nephrops under 250kW	VIIA	Demersal trawls and seines	Nephrops	<250 kW	>= 10m	
4	Area VIIb-k trawlers 10-24m	VIIIE, VIIFG, VII other	Demersal trawls and seines	Not Nephrops		>= 10m & <24m	
5	Area VIIb-k trawlers 24-40m	VIIIE, VIIFG, VII other	Demersal trawls and seines	Not Nephrops		>= 24m & <40m	
6	UK Gill netters over 10m		Drift Nets and Fixed Nets	Not Nephrops		>= 10m	
7	UK Longliners over 10m		Gears using hooks	Not Nephrops		>= 10m	
8	Low activity vessels over 10m					>= 10m	< £10,000
9	Low activity vessels under 10m					< 10m	< £10,000
10	Miscellaneous vessels over 10m					>= 10m	
11	North Sea beam trawl over 300kW	NS	Beam Trawl	Not Nephrops	>= 300 kW	>= 10m	
12	North Sea beam trawl under 300kW	NS	Beam Trawl	Not Nephrops	< 300 kW	>= 10m	
13	North Sea nephrops trawl over 300kW	NS	Demersal trawls and seines	Nephrops	>= 300 kW	>= 10m	
14	North Sea nephrops trawl under 300kW	NS	Demersal trawls and seines	Nephrops	< 300 kW	>= 10m	
15	North Sea and West of Scotland demersal trawl over 24m	NS, WoS		Not Nephrops		>= 24m	
16	North Sea and West of Scotland demersal pair trawls and seines	NS, WoS	Demersal trawls and seines	Not Nephrops	Paired Trawl	>= 10m	
17	North Sea and West of Scotland demersal seiners	NS, WoS	Demersal trawls and seines	Not Nephrops	Scottish Seiner	>= 10m	
18	North Sea and West of Scotland demersal trawl under 24m, over 300kW	NS, WoS	Demersal trawls and seines	Not Nephrops	>= 300 kW	>= 10m & <24m	
19	North Sea and West of Scotland demersal trawl under 24m, under 300kW	NS, WoS	Demersal trawls and seines	Not Nephrops	< 300 kW	>= 10m & <24m	
20	UK pelagic trawl over 40m		Pelagic: Trawl, Seiner / Purse Seiner	Mackerel		>= 40m	
21	UK pots and traps 10m-12m		Pots and Traps			>= 10m & <12m	
22	UK Pots and traps over 12m		Pots and Traps			>= 12m	
23	South West beam trawl under 250kW	VIIIE, VIIFG, VII other	Beam Trawl		< 250 kW	>= 10m	
24	South West beam trawl over 250kW	VIIIE, VIIFG, VII other	Beam Trawl		>= 250 kW	>= 10m	
25	UK demersal trawls and seines under 10m		Demersal trawls and seines			< 10m	
26	UK drift and fixed nets under 10m		Drift Nets and Fixed Nets			< 10m	
28	UK pots and traps under 10m		Pots and Traps			< 10m	
29	UK hooks under 10m		Gears using hooks			< 10m	
30	West of Scotland nephrops trawl over 250kW	WoS	Demersal trawls and seines	Nephrops	>= 250 kW	>= 10m	
31	West of Scotland nephrops trawl under 250kW	WoS	Demersal trawls and seines	Nephrops	< 250 kW	>= 10m	
32	UK scallop dredge over 15m		Dredges	Scallops, queen scallops, cockles		>= 15m	
33	UK scallop dredge under 15m		Dredges	Scallops, queen scallops, cockles		<= 15m

HOW IS YOUR DATA USED?

1

FIELD RESEARCH

Seafish researchers visit ports around the country, interviewing fishing business owners and collecting consent to view accounts.

2

SEGMENTATION

Vessels are grouped into segments by length, capacity, gear type and fishing location.

3

FINANCIAL ACCOUNTS

Seafish economists contact accountants to collect copies of financial accounts from vessel owners who have given permission.

6

a) Individual benchmark reports are produced at **vessel owners** request for those who contributed accounts to the sample.

b) Data feeds into advice and reports for **industry** and **policy makers**.

REPORT PRODUCTION

5

DATA ANALYSIS

Aggregated data is analysed to estimate turnover, profit and expenses for all segments.

4

SCALING DATA

Anonymised accounts are used as samples and scaled up using MMO data, providing estimates for all UK vessels. Individual information is never released.

If you would like to take part in the next Fleet Survey, or for more information, please contact:
