## What is a Suspended Wellhead?

After initial drilling, a well may be temporarily suspended if an operator intends to carry out further operations at a later date. In this event a guide base is left on the seabed to facilitate re-entry. The structure resembles an inverted table, approximately 12 feet square with legs some 12-15 feet high. A central pipe about 20 inches in diameter normally projects about 10-15 feet from the seabed. These wellheads are not usually marked by buoys, however some operators may do so at their discretion.

For more information of suspended wellheads and other oil & gas structures, please download the FishSAFE Companion App. **The App can be downloaded for Android and Apple tablet devices via the Google Play and the App Store.** Just Search for "FishSAFE".
