

Latest trends

The Lent period led to strong demand for fishery products, especially in Spain and Italy. Prices trended upward for the main groundfish species. In Spain, a shortage of shark led to a doubling of prices in just one month, between March and April 2021.

In the near-term, the rate of market recovery depends primarily on the reopening of restaurants in European countries. The United Kingdom of Great Britain and Northern Ireland is in the process of restarting the foodservice sector and demand for seafood is likely to increase as a result. In the European Union, vaccination programs are proceeding slower than was anticipated at the start of the year, and restaurants remain closed in several important markets, negatively impacting seafood businesses.

GROUNDFISH

Increasing demand and rising prices are reported in Russia for Alaska pollock and herring due to limited availability. On 6 April 2021, catches of Alaska pollock by the Russian reached fleet 723 900 tonnes, which is 16.8 percent lower than the same period in the previous year. Over 400 Russian companies are seeking to re-obtain their rights to export to China, and the supply crisis has led to significant problems in the European market, which is heavily dependent on imports of Alaska pollack fillet that are processed in China. Prices are now on the rise.

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

GROUNDFISH

Demand for aquacultured turbot is steady at present and prices are stable. In contrast, prices for wild turbot are increasing strongly, reflecting strong demand in the main markets, particularly Spain.

TUNA - BILLFISHES

Fishing in the Western and Central Pacific (WCP) has improved to moderate while raw material inventories at Thai canneries remain healthy. The COVID-19 situation in

TUNA - Pacific Ocean

Thailand seems to be under control and Bangkok port has returned to normal operations. Skipjack prices are generally stable.

Catches in the Indian Ocean remain moderate-to-good. However, fishing effort has been reduced as some vessels are tied up due to COVID-19. Raw material inventories at local canneries remain moderate. Skipjack prices have

increased in Mahe while yellowfin prices remain stable.

The FAD closure in the Atlantic Ocean ended on 31 March 2021. Since most of the fishing vessels have just started fishing, there is not much information available as to the initial fishing results. However, there is widely expected to be a major improvement

over the past few months. Raw material inventories at local canneries remain short for now. Both skipjack and yellowfin prices remain stable.

Fishing in the Eastern Pacific Ocean has slowed to moderate as fishing effort has decreased to about 64 percent of the fleet out at sea. Despite the reduction of local catches, raw material inventories at local canneries are at healthy levels due to

containers and carriers arriving from other markets. Skipjack prices have fallen but yellowfin prices have risen due to shortages.

The European price for skipjack remains steady while yellowfin prices continue to increase. The market price for cooked, single cleaned skipjack loins has increased slightly.

CEPHALOPODS

The squid fishing season in South Africa is now closed until 1 July. Weak catches mean there is no leftover stock and prices have not moved, while the persisting poor market environment caused by the COVID-19 pandemic in Italy and Spain is limiting demand. The South African currency has been relatively strong, which has also not helped exporters.

Octopus prices have been continuously rising since the beginning of this year and demand from Japan is strengthening.

CRUSTACEANS

The fresh shrimp fishing season in Argentina has come to an end, while the fishing season to the north of the 41st parallel started only in mid-April. As a result of limited production, the country's coldstorage holdings are low. In Europe, importer stocks are also low, and demand seems to be picking up after the very difficult market situation last year. This has

led to some price increases, especially for the 10/20 size. In the meantime, traders are awaiting the opening of the frozen shrimp season in Argentina, but some continuing restrictions due to the ongoing effects of the pandemic are likely.

Shrimp aquaculture production has been steady, with sufficient supply and prices holding steady at the same level for the past few weeks. Compared with last month, the share of small-sized shrimp in total output is higher due to the start of the rainy season, meaning larger sizes are in limited supply. Medium sizes such as 70 head-on

are still available, however, as a result of the stocking of ponds in early February.

Crab prices rose by EUR 1.00 per kg in the month of April, which is normal at this time of the year. Last year was an exception, but this can be attributed to the early impact of COVID-19 on crab trade. This return of seasonal patterns has boosted optimism among crustacean traders.

BIVALVES

The market for bivalves remains quite challenging. In France, restaurants are still closed, which eliminates a major source of demand. According to the latest

announcement from the government, the current plan is to allow the staged reopening of restaurants from 15 May onwards, based on a successful rollout of the vaccination program. The French bouchot mussel season is over, as is the Dutch bottom mussel season, and Irish organic rope mussels are the most plentiful option at French retail.

Oyster producers in France have been even more severely impacted than mussel

traders by the restaurant closures. Their main sales outlets in the meantime are retail and takeaway or home delivery.

FRESHWATER

The Spanish market for freshwater fish has been relatively strong. Imports of frozen tilapia fillets were 272 tonnes in January 2021, a 10 percent up from the same month of 2020. Unit values also increased from USD 2.70 per kg to USD 2.92 per kg. China is by far the most important supplier of this product to the Spanish market.

Meanwhile, the pangasius market in Spain continues to shrink. In the first month of 2021, some 389 tonnes of frozen fillets of this species were imported, compared with 582 tonnes in January 2020 and 758 tonnes in 2019. The main reason for this decline was reduced demand from the HORECA sector, which uses pangasius as an ingredient in cheap seafood options in fixed priced menus. In line with the slow

demand, the unit value of frozen pangasius fillets declined from USD 3.55 per kg in January 2019 to USD 2.85 per kg in January 2020 and finally to USD 2.40 per kg in 2021. Viet Nam remains the main supplier of this product to the Spanish market.

SALMON

European prices for farmed Atlantic salmon have been increasing steeply since the end of February from a low base at the beginning of the year. The NASDAQ Salmon Index, a weighted average price of fresh head-on-gutted (HOG) Atlantic salmon out of Norway was at NOK 67.06 per kg as of week 14. This is around NOK 15 above the equivalent week in 2019 and represents an increase of 7 percent compared with 1 month prior and 57 percent compared with 12 weeks prior. The upward trend has been driven by seasonal demand in the run up to Easter, a partial return of demand in key COVID-hit markets, and ongoing supply difficulties faced by competing producer nations such as Chile and the UK. This is particularly true in Asian markets, where Norway continues to see significant growth.

Norway's Q1 salmon export revenues are well down year-on-year, however, due to the weak prices at the beginning of 2021 and a strengthening of the Norwegian krone versus most major currencies. According to the Norwegian Seafood Council (NSC), Norway exported 297 200 tonnes of salmon worth NOK 18 billion in the first quarter, respectively representing a 18 percent increase and a 4 percent decrease compared with the same period last year. The average unit value of these exports dropped from NOK 69 per kg to NOK 54.43 per kg over the same timeframe. Countries with large processing industries such as Poland and Denmark are taking a higher share of Norwegian volumes this year, a reflection of boost in popularity of value-added

convenience products that has been a core component of new consumer purchasing patterns since the pandemic.

In the UK, the Scottish salmon industry has had to contend with both the ongoing impact of the pandemic and with logistical delays associated with the range of new post-Brexit trade requirements. Industry stakeholders are calling for urgent action by the British authorities and have expressed concerns that the damage inflicted on the

country's reputation and suppliers' relationships with buyers may be difficult to reverse. Prices for fresh HOG Atlantics (3-6 kg) out of Scotland were averaging GBP 5.90 per kg in week 15, edging close to the levels observed this time last year.

Chilean production of farmed Atlantics is expected to drop 10-20 percent in 2021, concentrated towards the second half of the year, more or less offsetting the expected growth in European output. This should see

prices lift somewhat, but they are not expected to return to the exceptionally high levels achieved in recent years. Fish Pool forward contracts for April and May were closing at NOK 63.50 and 62.40 per kg respectively as of mid-April, falling back to NOK 61.93 per kg for Q2 as a whole. Caution continues to prevail in the market as the vaccine rollout schedule remains highly uncertain in most countries.

TROUT

Norwegian trout supply has been tight over the last few months, protecting the sector from severe price declines. For week 12, the average FOB price of fresh HOG trout out of Norway was NOK 60.60 per kg, around 10 percent above the same week last year. Volumes over the first quarter were 22 percent down in both volume and value according to the NSC, to 12 1000 tonnes worth NOK 751 million.

SEABASS SEABREAM

The European farmed bass and bream sector is closely following the progress of vaccine rollout programs across the continent as the peak summer season approaches. The sector has been able to stave off the worst effects of the COVID-19 pandemic by pivoting to retail and by virtue of a timely supply contraction last year. However, the absence of foodservice demand and the various travel restrictions remain a problem

for a sector that depends on the seasonal restaurant trade for a significant proportion of sales. One issue is that retail buyers tend to demand smaller sizes (300-600 g), leaving a surplus of larger fish.

In week 14, Spanish price data reported by the wholesale market Mercamadrid, shows prices for < 600 g seabream and seabass (Greek origin)

at EUR 4.50 and EUR 4.75 per kg respectively. Meanwhile, there has been no change in prices for Greek fish in the Italian market, with 300-450 g fish selling at EUR 4.40 and EUR 4.30 per kg for bream and bass respectively.
